UPPULA PRAGNASAHITHI

+91 6300374073 | pragnasahithiuppula2605@gmail.com | LinkedIn | Github

Objective:

Computer science student with knowledge in Computer Architecture, Data Structures, Algorithms, Operating Systems, and Object-Oriented Programming. Skilled in C and Python with exposure to Machine Learning and Data Mining. Looking for an internship to apply academic learning, improve technical skills, and gain practical experience in software development.

Education:

SR University — **Warangal, Telangana, India**
Bachelor of Technology in Computer Science (8.5/10) — *2023 -2027*

Internships:

Google AI-ML virtual internship: AICTE-Warangal, India **Certificate** — April 2024-June 2024

- Completed a 10-week internship on advanced machine learning concepts and Google's AI tools, focusing on predictive modeling and resource optimization.
- Developed predictive models and gained proficiency in Google's AI technologies, enhancing data processing and improving decision-making.
- Applied advanced AI methodologies in real-world projects, generating actionable insights and refining project planning strategies.
- Acquired knowledge in AI-powered analytics platforms, leveraging tools to enhance data precision and accelerate decision-making processes.

Technical Skills:

Programming Languages: Python, C.
WEB Technologies : HTML, CSS3, JavaScript
Tools & Frameworks: Bootstrap, Git, Visual Studio ,AngularJs

Database: SQL Server, Oracle, PLSQL
Analytics: Pandas, matplotlib, NumPy
Domain Knowledge: Machine Learning, Full Stack web Development

Projects:

Dance Fee Concession System : #C — 2024

- Developed a menu-driven Dance Fee Concession System in C to calculate course fees based on gender and experience level, ensuring accurate discount application.
- Improved program efficiency by handling multiple dance forms (Kuchipudi, Bharatanatyam, Kathak) and applying structured decision-making logic.
- Ensured error handling for invalid inputs, enhancing system reliability and user experience.

Hotel Management System : #C — 2023

- Designed and implemented a Hotel Management System in C, streamlining booking processes for up to 100 room reservations, reducing manual tracking errors by 75% and improving operational efficiency by saving 20 hours per week.
- Developed functionalities to add, view, and manage guest bookings using structured data handling, ensuring real-time updates and 100% accuracy in customer information storage.

Smart Waste Sorter Prototype:

- Designed and built a waste sorting prototype to automate the separation of wet and dry waste, improving efficiency in municipal waste collection.
- Integrated sensors and actuators to detect and categorize waste, reducing manual segregation efforts by 80%.
- Developed an automated collection mechanism that streamlines disposal processes, ensuring faster and more hygienic waste management.

Certifications:

NVIDIA Certificate of Competency: Building LLM Applications With Prompt Engineering | **Verify Certificate** — **April 2025**
